

# Success Design Exchange

Combine the power of a proven estimating solution with BIM modeling tools to quickly create **accurate, detailed estimates**

The ability to ensure that your estimate information is consistent with your building design is critical to the success of any project. If your company's process is less than ideal, **it's time to consider a powerful estimating solution that integrates seamlessly with Autodesk's Revit modeling software.**

**Success Design Exchange** provides the enterprise with a flexible data exchange engine which allows for the straightforward synchronization of Autodesk's Revit with your **Success Estimate** in one simple, robust solution ... not only saving time but increasing the efficiency of both applications.

## Key Features & Benefits

### Accelerated Estimate Creation

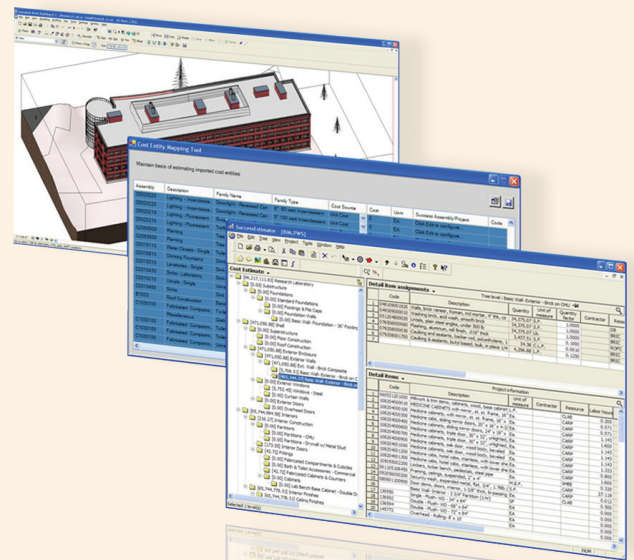

**Success Design Exchange** allows you to map BIM items against any combination of custom or commercial cost libraries – enabling instant creation of the estimate work breakdown structure along with detailed cost items. *Manual takeoffs are no longer required, speeding the estimating process and reducing the potential for human error.*

### Easy to Setup, Easy to Use

Developed with industry leaders, our powerful interface now makes instant data exchange possible with the push of a button. With a simple interface dialogue and minimal set-up, *the productivity of your designers and estimators is increased while reducing administrative costs.*

### Proactive Planning for the Future

Once an item has been mapped, that map will remain in place for future projects, *saving you valuable time.* Project teams can now predict changes in real-time and compare the cost of different design options, allowing you to *manage your project more efficiently and cost-effectively.*

"The ability to get dead-on counts from the Revit model has meant a huge improvement for timely, accurate costing. Now with the link between Revit and U.S.COST, we can use those quantities ourselves to develop our own cost estimates or streamline the verification of outsourced cost estimates."

— Ron Reim, Oculus principal and co-founder
