

THE FUTURE OF PROJECT CONTROLS

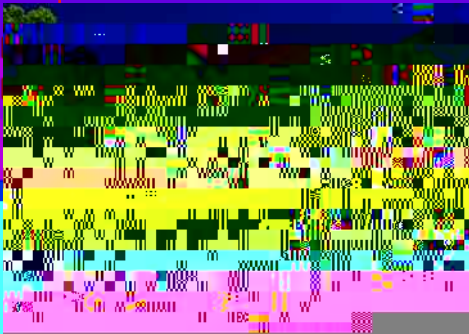

U.S. COST

PROFILE

U.S. COST has provided project controls services and software on capital projects of all types for over 20 years. Our customers include corporate owners, government agencies, program managers, architects, engineers, contractors, and others in the construction industry.

From production and project offices throughout the U.S. and overseas, our client-focused professionals stand ready to provide you with the precise expertise and software products to meet all of your capital project controls needs. Whether the requirement is to monitor and control a multi-billion dollar construction program, create your estimating software solution or simply produce a single conceptual cost estimate, you can rely on U.S. COST.

PROGRAM MANAGEMENT

PROGRAM MANAGEMENT

U.S. COST combines project management experience with the latest project controls expertise to assess scopes and phasing; enhance cost and schedule predictability; and identify, mitigate and manage risk during project assessment, design, procurement, construction, and closeout.

PROJECT CONTROLS

Project Controls Services range from traditional cost estimating and scheduling activities to change order assessments, claims assessments, and work-in-place evaluations.

COST ESTIMATING

From conceptual design through construction documents, the U.S. COST experienced, professional cost estimating staff uses the latest technologies and market conditions/trends analyses to mitigate cost risk and support design decisions.

VALUE ENGINEERING/ANALYSIS

U.S. COST Value Engineering/Analysis is structured as an integral part of the planning, programming and design process, giving clients the freedom and flexibility to propose and evaluate alternatives and their affects on initial and life cycle costs and risk in a one team environment.

SCHEDULING

U.S. COST's professional scheduling staff has the interpersonal and technical skills necessary to develop effective, logic-driven, time-phased CPM schedules for initial assessment and ongoing management of your project.

JOB ORDER CONTRACTING (JOC)

U.S. COST's JOC Technical Documentation and Software is used at facilities around the world that rely on the Job Order Contracting procurement method to reduce lead time for obtaining construction services at known costs.

SPECIAL PROJECTS

Special Projects include Market Cost Analyses; Life Cycle Cost and Economic Assessments; Criteria, Policy & Procedures Development; Contracting Method Assessments; and Repair, Operations and Maintenance Cost Analyses. Additionally, we perform Construction Audits and Cost Segregation Studies, and develop Custom Software Solutions.
