

## What's New for Success Enterprise 8.1

### **Instantly Generate Custom Reports - SQL Server Reporting Services**

Version 8.1 of Success Enterprise has leveraged the powerful SQL Server Reporting Services application to enable users to create and run reports without previous report authoring experience. These reports can be quickly generated and saved as part of a report library accessible to other users or run on an ad-hoc basis.

### **Improved Performance - Quick Saves via Ajax**

Previously you had to click the 'Save' button whenever you wanted to commit any changes to a grid to the database. Now, you can simply click anywhere other than the row you were editing to quickly commit changes to the database. This method of saving information will reduce 'concurrency' errors where multiple users are attempting to edit information in the same grid at the same time.

### **Save Time and Increase Accuracy w/ Project Update**

Quickly update project costs against other projects or databases. Adjust resource rates, adjustments and more with the Project Update feature.

### **Easy Selections w/ Validated Lists for Custom Fields**

Now, when you create a custom field in Success Enterprise, you can create a list of possible values that users will have to select from. This is helpful for defining 'required' inputs which may need a specific entry to trigger Adjustments or Reporting groups.

### **Instant Integration w/ Active Directory / Membership Services**

Quickly set up your users for Success Enterprise by importing them from your Windows network's Active Directory listing.

### **Quickly Tag and Adjust Items in the Estimate with the New Inherit Feature**

This feature allows the user to "tag" or auto-fill a column of information based on a code placed at the parent level. This is very effective for making quick, global changes to a bunch of items that may utilize a different rule or adjustment based on a different tag. For Example, at the parent level, changing the code from GA to CA might place a different labor cost adjustment for California and automatically apply it to all the items in that level.

### **Help Center with Search and Print Features**

The detailed Help Center and Quick Guide "how-to's" are back in Success Enterprise 8.1; and now you can quickly find what you need in the detailed Help Center, as well as access a print-ready PDF of the manual. The Help Center features a contents pane which is accessible no matter on which page of the Help Center you are. Quick scan the contents, or perform a keyword search
